The data for "Ontario Exports by Commodities" was acquired, initially, from Dominion Bureau of Statistics sources on computer print-out sheets, which show the origin and destination of Canadian commodity exports by regions across Canada. Ontario exports were obtained by extracting those commodities which pertain to the Ontario region.

"Ontario Exports by Commodities" lists all countries to which a given commodity from Ontario was exported in 1967.

This year the Department of Trade and Development also published a companion book: "Ontario Exports by Countries." This publication shows all commodity exports from Ontario to a given country.

Ontario's exports in 1967 totalled \$4,700,000,000, 55 per cent of which was accounted for by exports of "end-products, inedible," valued at \$2,600,000,000. In this category, the export of motor vehicles and parts (\$1,500,000,000) was the single, most important item. Other products of significance were aircraft and parts (\$199,000,000); haying and harvesting machinery (\$117,000,000); measuring, controlling, laboratory, medical and optical equipment (\$90,000,000), and office machines and equipment (\$57,000,000).

"Food, feed, beverages and tobacco," valued at \$345,600,000, represented only 7 per cent of Ontario's exports. Significant exports in this category were distilled alcoholic beverages (\$90,600,000), and unmanufactured tobacco (\$46,800,000).

"Crude materials, inedible," valued at \$528,900,000, represented 11 per cent of total Ontario exports. Major items were nickel in ore concentrates and scrap (\$200,000,000); iron ores, concentrates and scrap (\$78,000,000); copper in ores, concentrates and scrap (\$38,000,000), and precious metals in ores, concentrates and scrap (\$35,000,000).

"Fabricated materials, inedible," valued at \$1,200,000,000 accounted for 25 per cent of Ontario's exports. The most important items in this category were nickel and alloys (\$160,000,000); copper and alloys (\$100,000,000); plate, strip and sheet steel (\$79,000,000); unshaped plastics and synthetic rubber (\$57,000,000); paper for printing (\$239,000,000), and wood pulp (\$111,000,000).

## INTRODUCTION

Ontario commodity exports have now been compiled for 5 years. The 1969 edition of 'Ontario Exports by Commodities' is the third such publication. The 1967 edition contained information for the years 1966 and 1967, and the present edition compares 1968 and 1969. Information for the year 1965 was included in the 1966 publication of "Statistics for Profit". In the description of Ontario exports which precedes the tables, we have shown some comparisons between the years 1965 and 1969.

"Ontario Exports by Commodities, 1969" has a revised format. In order to provide users with a better overall picture on Ontario exports with comparisons and changes, our domestic export statistics are divided as follows:

- (1) Group Number
- (2) Commodity-Country description
- (3) Value of Ontario exports—1968
- (4) Value of Ontario exports—1969
- (5) Value of Canadian exports—1968
- (6) Value of Canadian exports—1969
- (7) Ontario as percentage of Canadian exports—1968
- (8) Ontario as percentage of Canadian exports—1969
- (9) Percentage changes of Ontario exports 1968-1969

Data on Ontario re-exports by commodities are appended to the above statistics.

These statistical data were acquired from the Dominion Bureau of Statistics sources on computer tapes, showing the destination of Canadian and Ontario exports.

The classification used in "Ontario Exports by Commodities" is the Standard Industrial Classification of D.B.S. The values are F.O.B. at point of lading.

In addition to the statistical data on Ontario domestic exports and re-exports which we publish on a yearly basis, we also have computer data on Ontario and Canadian exports for the current year by quarters. These additional data are available upon request. Please direct your request, stating group number and country to:—

## EXPLANATORY NOTES

**Ontario Exports:** This term includes both Ontario domestic exports and re-exports.

**Ontario Domestic Exports:** These include both goods which are wholly produced in Ontario and goods previously imported which have been changed in form by further processing in Ontario.

**Ontario Re-Exports:** Goods which are imported into Ontario, not re-fabricated, re-processed, re-converted, or changed in any form, and subsequently re-exported to other countries.

## ONTARIO EXPORTS BY COMMODITIES 1965 – 1969

In 1969, Ontario exports were valued at \$6.8 billion which compares with \$2.7 billion in 1965. This is an increase of 149%. Ontario was responsible for 46% of Canadian exports in 1969.

In the period 1965-1969 Ontario exports have grown twice as fast as Canadian exports. However, the growth of exports by commodity groups was not an even growth. Ontario exports of live animals, food, beverages and tobacco, and of end products inedible have grown much faster than the Canadian totals in these categories. However, the growth in exports of crude materials and fabricated materials from Ontario has not been as rapid over the past four years as that from Canada as a whole.

In 1965, Ontario exports of fabricated materials inedible (37% of the total) together with end products inedible (34%) accounted for nearly three quarters of the total value. However, the share of fabricated materials inedible in the total has declined steadily so that this category only accounted for one-fifth of 1969 total. In contrast, exports of end products inedible have shown spectacular increases, inasmuch as they accounted for two-thirds of the total in 1969.

All other categories have declined in importance in Ontario exports to the point that they now (1969) each carry only about half the share they did in 1965.

Source: D.B.S.

In the period 1965-1969 Ontario's exports (including re-exports) to all countries have grown by 149%. This growth has been achieved primarily as a result of the phenomenal growth in the category 'end products inedible' which has grown by 381% in the past four years. This in turn reflects the increase in automotive exports to the United States under the Automotive Agreement between the U.S. and Canada which came into effect in January 1965.

The category 'food, beverages and tobacco' has shown the least growth since 1965 largely as a result of the decline over the past two years in exports of cereals from Ontario.

The growth in the export of both 'fabricated materials inedible' and 'live animals' has shown a steady increase during the past four years. The growth in crude materials inedible would have been much more impressive had there not been a sharp decline in exports of copper ore and nickel ore in 1969 as a result of strike activity.

Destination of Ontario Domestic Exports, 1969:

The United States is Ontario's principal market in all major export categories. This dominance is especially strong in "end products, inedible," with 89% of Ontario manufacturers going to the U.S. The United Kingdom is an important market for "crude material, inedible" exports and exports of "fabricated materials, inedible" from Ontario.

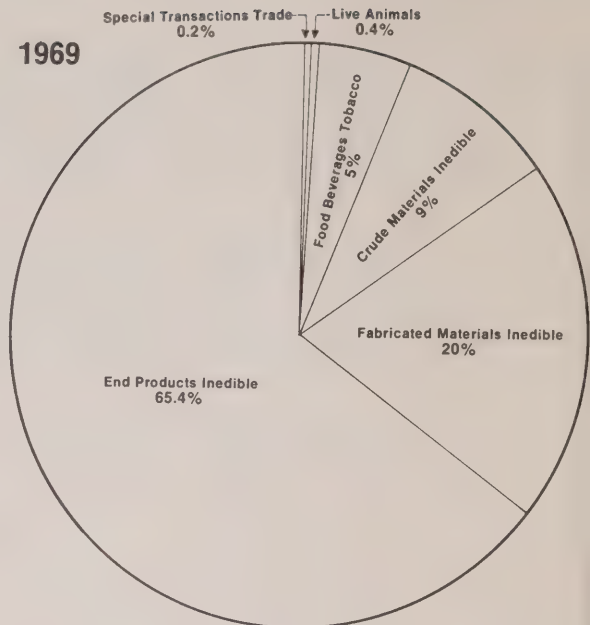

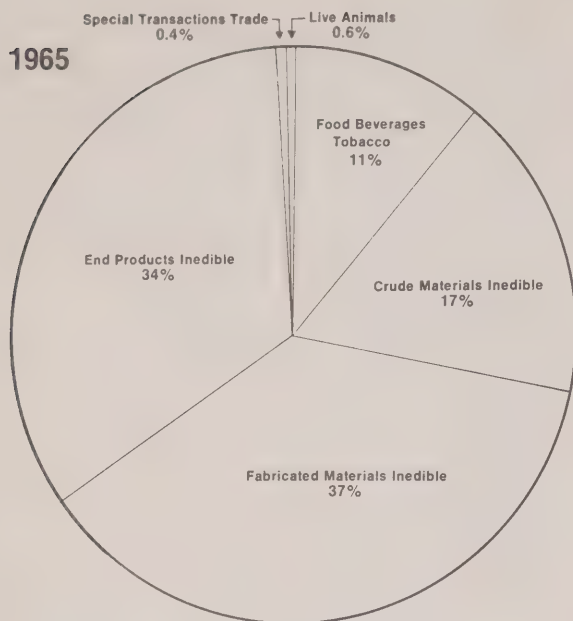

The common market countries take 11% of "fabricated materials, inedible" exports.

## EXPLANATORY NOTES

These statistical data were acquired from Statistics Canada sources on computer tapes, showing the destination of Canadian and Ontario exports.

The classification used in **Ontario Exports by Countries** and **Ontario Exports by Commodities** is the Standard Industrial Classification of Statistics Canada. The values are F.O.B. at point of lading.

**ONTARIO EXPORTS:** This term includes both Ontario domestic exports and re-exports.

Ontario Domestic Exports include shipments abroad of goods wholly produced in Ontario, together with exports of previously imported goods which have been changed in form by further processing in Ontario.

Re-exports or exports of foreign products include only goods previously included in import statistics which are re-exported from Ontario in the same form as when imported. Minor operations such as cleaning, sorting or repacking are not considered as changing the basic structure of imported goods.

Our statistical data on Ontario exports for 1970 are supplemented with information on Ontario's exports "by stage of fabrication". A classification of our exports on the basis of the degree of manufacture provides data which indicate the relative importance of the various sectors of the economy in our trade.

Statistics under the heading "Stage of fabrication" are applied to three groups, namely Crude Materials, Fabricated Materials and End Products which are the groupings used by Statistics Canada.

**Crude Materials** include natural products not further processed than cleaned or prepared for shipment (Section I, III and parts of Sections II, and VI of D.B.S. classification).

**Fabricated Materials** include items which are used for further processing by secondary industries (Section IV and parts of Section II and VI).

**End Products** comprise commodities which have attained their final degree of processing (Section V and parts of Section II and VI).\*

# INTRODUCTION

The past several years have brought dramatic changes in the composition and flow of world trade. The accelerated pace of technological change, improved communications and modes of transport, have accelerated the invasion of international markets by new products and suppliers. Under the pressure of new protectionism, economic integration and tariff and non-tariff barriers, the business of exporting has become more complicated.

Canada and Ontario are facing a growing problem of adjustment to the increasingly rapid shifts in the pattern of international trade. Sustained export growth is essential to the development of our economy.

From 1966 to 1970, Ontario exports increased by 200%; increased sales were recorded in all major sections. However, the increase in Ontario exports by sections was not uniform. The slowest expansion occurred in exports of food, beverages and tobacco, and the faster rise in exports of end products. The composition of Ontario exports in the 1960's showed a constant shift from primary commodities to manufactured goods. Among manufactured goods three groups expanded most markedly: motor vehicles and parts, machineries, and aircrafts and parts.

The following table shows composition of Ontario Exports, 1966-1970 by sections

Ontario exports in 1970 reached an unprecedented high of \$7,527 millions, which is a 10.5% increase over the year 1969. Exports of End Products, Inedible amounted to \$4,673 million, an increase of \$231 millions over 1969. However, the share of "End Products, Inedible" in total Ontario exports decreased from 65% in 1969 to 62% in 1970.

The destination of Ontario Exports, 1970 in percentages was as follows:

By far the largest share of Ontario exports in 1970 in all commodity sections, went to the United States, followed by the United Kingdom and European Common Market Countries. Ontario exports to these countries consist mainly of raw materials. Most of our competition in the European Common Market for manufactured goods, originated within the Community itself.

In the Section "Live Animals", the leading Ontario export items are cattle, followed by poultry. 81% of exports in this section in 1970 went to the United States. Ontario exports of Live Animals by commodity groups 1970, in percentages were as follows:

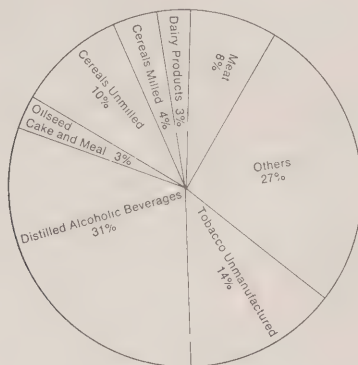

LIVE ANIMALS

The most important Ontario export commodity in the Section "Food, Feed, Beverages and Tobacco" is distilled alcoholic beverages which amounted in 1970 to \$120 million with the U.S. as our principal customer. Ontario is also an important supplier of tobacco. Our exports of unmanufactured tobacco in 1970, were \$53 million, the United Kingdom being our most important market.

The division of Ontario exports, 1970, of the Section "Food, Feed, Beverages and Tobacco", in percentages was as follows:

FOOD, FEED, BEVERAGES AND TOBACCO

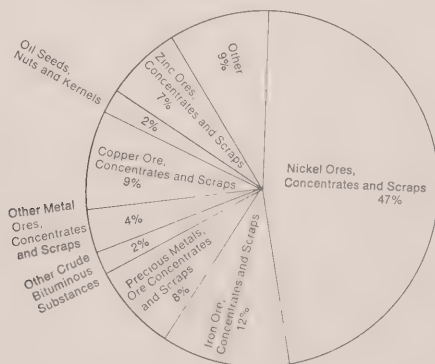

By value and importance, Ontario exports of minerals represent the most important part of the section "Crude Materials, Inedible". Mineral production plays a prominent role in the economic growth and development of Ontario.

In value of mineral production, Ontario is the leading Province in Canada. More than half of the total output of the mineral industry, in the prime processing stage, is exported. Exports of minerals and fabricated mineral product, represent in value, the second most important segment of Ontario exports next to fully manufactured goods.

Exports of "Nickel in Ores, concentrates and scrap" are the most important Ontario export items in this section; our exports in this group in 1970, were \$344 million, the U.K. being our biggest customer. In order of values of exports in this section, nickel is followed by "Iron ores, concentrates and scrap" with \$91 million, "Copper in ores, concentrates and scrap" with \$67 million and precious metals \$58 million.

The division of Ontario exports, 1970, of the section "Crude Materials, Inedible", was as follows:

CRUDE MATERIALS, INEDIBLE

The section "Fabricated Materials, Inedible" represents a wide range of products defined as: "materials which have the common characteristics of materials in the sense that they will be involved in further processing before reaching the form in which their **end use** is being served".

In general, these items can be subdivided into five large sub-sections: products based on forest resources; metal, alloys and metal products; chemicals and products, textiles and sundry products not directly related to the four previous sub-sections.

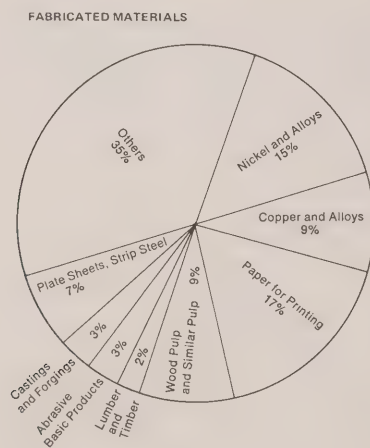

Among forest based products, the most important Ontario export commodity is newsprint. Exports of "Paper for Printing" in 1970 totalled \$271 million, of which exports to the United States accounted for \$265 million; exports of wood pulp and similar pulp amounted to \$141 million and lumber \$34 million. Other important export commodities are veneer, plywood and other wood fabricated materials, as well as various types of paper.

Major metals in various fabricated forms represent an important factor in Ontario exports. The major export groups are nickel and alloys; iron and steel, primary and fabricated forms; copper and alloys; castings and forgings; and precious metals.

Ontario's exports of chemicals as a whole, are made up of large groups of inorganic and organic chemicals and products, fertilizers and fertilizer materials, plastics and synthetic rubber.

Exports of textiles include yarn, thread, fabrics and miscellaneous textile fabricated materials. In the sundry group of this section, the principal export groupings are: leather and leather fabricated materials, rubber fabricated materials, vegetable oils and fats; petroleum and coal products, abrasive basic products and other fabricated materials.

Ontario exports of "Fabricated Materials, Inedible" by commodity groups, 1970, in percentages, were as follows:

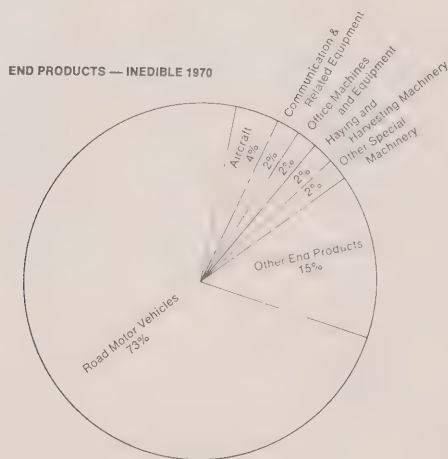

The Canadian Domestic market for manufactured goods is small in comparison with the domestic or integrated markets of other developed countries. For this reason, the greatest potential for the increased growth in our manufacturing industry, can best be found in foreign markets.

Ontario exports of "End Products — Inedible" — fully manufactured goods — increased in value from \$924 million in 1965 to \$4,674 million in 1970; while the share of fully manufactured goods in total Ontario exports in 1965 was 34 per cent, this share in 1970 was 62 per cent. This increase had its source primarily in the export of passenger cars and parts, shipped to the United States under the provisions of the 1965, U.S.-Canadian automotive agreement. However, Ontario exports of fully manufactured goods are still impressive, even when our exports of motor vehicles are excluded. Ontario exports of fully manufactured goods — excluding road motor vehicles and parts — in 1970 were \$1,346 million and in 1969 \$1,236 million.

By far the largest share of Ontario exports of manufactured goods are directed to the United States. This dependency makes our exports and our manufacturing industry, very sensitive to fluctuations in the economic policy of the United States. The diversification of our exports both by commodities and countries, is of great importance to our economy. Our share of participation in the rapidly expanding world economy, depends on our ability to compete with other exporter-nations. Improved technology and increased productivity, are the keys to competitiveness.

Ontario exports of "End Products — Inedible" 1970, by commodity groups and percentages were as follows:

Ontario exports in the section "Special Transaction Trade" in 1970 amounted to \$14 million and represent the smallest share in Ontario exports. This section contains certain transactions which do not have any international financial implications, or which, for various reasons, are better considered separately from merchandise trade in an economic analysis.

## Ontario Exports by Section and Stage of Fabrication

The presentation of Ontario domestic exports by stage of fabrication is based on methodology worked out by Statistics Canada, which requires a secondary classification of the commodities in certain sections of the Standard Commodity Classification\*. Comparing 1969-1970, Ontario domestic exports by stage of fabrication were:
